Hi Luke,

Things are fine here - hope you are doing well too!

Thanks for sending along this poster, which looks good. How small are the posters supposed to be?

Some suggestions:

- General - the text in the poster appears to be similar to the abstract that you submitted. You don't need to stick to that word count guideline exactly. In its current form some of the sentences are truncated and awkward and they may consequently be difficult for the audience to interpret; you can also consider adding some references;
- Aim: " ... as determined by insulin sensitivity ... " Just using "by" can imply simpler categorical analysis;
- Methods: the truncation of the last sentence makes it very difficult to understand. I think you need to expand it, especially with regard to how the outcomes are being utilized in this particular statistical approach. Also, the sentence needs a period;
- Results: again, you are not restricted to a word count so I think the text needs to be revised accordingly. For example, the first sentence would benefit enormously from starting with "The ... ". And another "the" before "outcomes".
- Results, 3rd sentence ... "Only some ... " is very awkward. Consider "A limited number of ... ";
- Results, last sentence ... which component are you referring to here?
- Conclusions: first sentence needs to be revised: " ... and that they are ..." is grammatically awkward given how this sentence starts;
- Conclusions: second sentence: "These results suggest ... "
- Conclusions: last sentence: " ... mediators between the observed association of simple carbohydrate intake with diabetes risk".

Figures look good!

All the best,

Tony

Subject: Draft of poster for EDEG

Hey Tony, I hope everything is going well! I've created a draft of the poster for EDEG. Its unfortunate that the instructions are for such a small poster, but oh well.

Looking forward to hearing your feedback!

Luke
